PREDICTION OF DISORDERED BREATHING

5

ABSTRACT OF THE DISCLOSURE

An approach for predicting disordered breathing involves detecting one or
10   more conditions associated with disordered breathing. The detected conditions are
compared to disordered breathing prediction criteria. A prediction of disordered
breathing is performed based on the comparison of the detected conditions to the
prediction criteria. At least one of comparing the detected conditions to the prediction
criteria and predicting disordered breathing is performed at least in part implantably.
